

Myakka Technologies, Inc. is a 100% wireless ISP (WISP) serving the rural areas of Florida's Sarasota and Manatee counties. We are a small family owned business and have been proudly serving our community since 2001. We fully agree with the official WISPA position on the use of the whitespace frequencies. Currently our biggest problem is providing a reliable connection to some of our customers. In these cases we have to operate on the same non-licensed frequency as cell phones, cordless phones, baby monitors, wireless speakers, etc. 90% of our customers have no other Broadband choice other than satellite, which is unacceptable for low latency applications such as VPN, VOIP, gaming, etc. Having our own spectrum, void of these other devices, would give us the ability to better serve our current and future customers, and bring a reliable broadband connection to people in the rural areas of our community.
